Unity Group

ABOUT US

Billed as Japan's Bitcoin, Jasmy is a tokenized platform that champions the democratization of data by combining blockchain and IoT technology to provide an infrastructure that allows anyone to use data safely and securely.

However, as an evolving field, IoT comes with uncertainty. It might be insecure, unstable or experience data leakage, due to its centralized nature. Many of today's network services are provided by huge companies such as Google, Amazon, Apple and Facebook. As users, we pass on a lot of personal data that is exchanged across communication networks and applications and collected by each platform's centralized system, managed and analyzed, and used for various purposes.

The Internet of Things (IoT) is a concept that encompasses all hardware and devices, from wearables to cars, and even large aircraft; it's constantly working around us, generating data that enriches our lives and benefits us all.

OUR TEAM

Our management team consists of former Sony executives who possess long and rich experiences in creating innovative products. Representative Director Kunitake Ando, who has always held an entrepreneurial mindset and has driven innovation since his days at Sony. He has a wealth of experience in establishing new business models, including the launch of Personal Computers under the VAIO brand and Sony's life insurance business, from scratch. President & CEO Kazumasa Sato has many years of experience in identifying and scaling up businesses towards existing market needs. Executive Vice President Masanobu Yoshida has many years of experience in technology R&D at large companies, including senior executive roles. CFO Hiroshi Harada is a Japanese CPA well versed in corporate governance and financial accounting, especially in the IPO process. Alongside these experienced individuals, the Jasmy project consists of a multinational team working actively together as we foresee a future in global development.

TEAM INTRODUCTION

Representative Director Kunitake Ando

Former President and COO of Sony Corporation, President and COO of US Sony Engineering and Manufacturing of America, Chairman of Sony Financial Holdings, Chairman of Sony Life Insurance Co., Ltd. Assumed office as CEO of Unity in April 2016. Currently director of the Japan Innovation Network and Chairman of the University of Nagano.

Vice President & CTO Masanobu Yoshida

President of Sony Corporation Handheld Computer Company, Sony Ericsson Mobile Communication now Sony Mobile Communications Inc. Department head, Managing Operating officer of Softbank Mobile, General Manager of product services etc., currently CEO of Dreamforest Corporation. Vice president of Unity from April 2016.

President & CEO Kazumasa Sato

Former CEO of Sony Style.com Japan Inc, Operating officer of Sony Marketing (Japan) Inc. and President of Sony Style Company, managing director of Sony Style Japan and operating officer of Sony Marketing Inc., Head of the Sony Corporation Creative Center, Chairman of BJIT Group, joined the Unity Board of Directors in April 2016, CEO of Unity Incorporated from November 2018.

CFO Hiroshi Harada

After passing the Japanese CPA examination in 2008, joined KPMG AZSA LLP. He has been engaged in statutory auditing for listed companies across industries, including broadcasting, construction and manufacturing, as well as IPO support services with which his client successfully went public. After 11-year experience at auditing firm, he joined Unity as CFO in January, 2020.

OUR MISSION

The Jasmy platform is thus a 'place' built by a democratic decision-making in a decentralized world, rather than being determined by a central authority. The value of Jasmy lies in your ability to choose who sees your data, what it's used for and how it's stored.

As a neutral environment where all kinds of businesses, organizations, and individuals can utilize the data that is being generated and developed from the Jasmy Platform, we can boost innovation and to create a better, more secure future for all.

Jasmy aims to regain data sovereignty for all ,With the innovative use of blockchain technology, we can create a decentralized and more democratic use of data where you will be able to:

Safely and securely manage and control your own devices

Store and control your data in a safe and secure manner

Provide safe and secure use of your data under clear rules.

unitygroup.asia

OUR VISION

Jasmy was founded with the idea of data democracy. We believe in every person's right to safer and more secure personal data.

To move away from the current centralized world, we envision a robust IOT platform where data is decentralized and democratized.

Our goal is to provide an environment for companies to build IoT projects that is easy to introduce and ready-to-use.

unitygroup.asia

HOW IT WORKS?

IOT DEVICES

We'll equip you with the right devices to develop your IoT platform such as IoT communication modules and wearable devices.

IOT PLATFORM

Our secure IoT platform enables you to manage your IoT data securely and efficiently via a centralized management system.

IOT SERVICES

We'll help you create the right environment for IoT with a full suite of services and drive developer community engagement to continuously enhance your product.

IOT PLATFORM

IOT DEVICES

IOT SERVICES

SECURE DATA ANALYSIS

STRATEGY & MANAGEMENT SUPPORT

We'll work with you to develop your IoT business strategy, and we'll be with you every step of the way from product planning to release

SECURE DATA ANALYSIS

Our platform is optimized to gather, analyze and utilize the data measured and sensed by the IoT, using our proprietary blockchain technology.

Jasmy operates on the following principles:

To secure an individual's data from IDs, application logs, and data from IoT devices in their usage, storage, and maintenance.

To allow companies to utilize data in a wide ranging manner, if authorized by the respective individuals.

Fresh data generated by IoT devices will be stored securely and merchants are required to pay for access to your data

unitygroup.asia

WHY IS IT IMPORTANT?

Formed "Jasmy Initiative" to realize IoT that creates value :

We aim to provide safe and secure IoT devices and services, and to spread awareness of user-oriented democratic data utilization by utilizing the "Jasmy IoT Platform," and we hope that companies will take the lead in using this project as a role model. and formed the "Jasmy Initiative".

We plan to begin activities such as design, proof of concept, demonstration experiments, and information exchange in April 2019 to realize profitable business on the platform.

A new data economy brought about by Jasmy IoT Platform :

Currently, much information about ourselves is provided to each company and managed within their databases. These are analyzed based on various factors such as preferences and lifestyle, and are returned to individuals and society in the form of improved services. This is clear evidence that data has economic value. It's certainly nice to see a variety of services improve the quality of our lives, but can we imagine a time when we can achieve the same thing while also using data as personal assets?

Jasmy's vision for a new age of consumer-oriented information is important because by returning the value of this data to its original owners, the individuals, we can build an economic zone where data can be treated as a personal asset. Through the safe and secure Jasmy IoT Platform, Jasmy's customer companies will play a role in the formation of new markets and society as members of this economic zone, as service providers based on trust.

JASMY'S ECOSYSTEM

At the heart of Jasmy is the Personal Data Locker (PDL). With it, we can create an environment where users can attribute their data to themselves and decide for themselves what to do with it.

Meanwhile, service providers will be able to offer products and services without having user information. By using the service, fresh data generated by IoT devices and other devices will be stored in the PDL and service providers will be able to promote new businesses by utilizing this data.

In return, Jasmy receives an appropriate royalty in exchange for providing the platform.

KEY COMPONENTS OF JASMY'S ECOSYSTEM

Personal Data Locker (PDL)

This personal data locker is a "content addressing" solution that allows secure storage of files within the P2P network.

Secure Knowledge Communicator (SKC)

The Secure Knowledge Communicator (SKC) is the platform's core service that allows us to achieve data democratization by controlling, managing, and tracing our own personal data by ourselves.

Smart Guardian (SG)

The Smart Guardian (SG) is another core service in the Jasmy platform that allows easy and secure registration of IoT devices on the distributed network, and at the same time, to create an environment that can only be used by the owner of the devices.

Jasmy Secure PC

Jasmy Secure PC can provide enterprises with access control and security of access programs at the network boundary, as Enterprise remote office security escort.

Jasmy Solution x Data Management

Data generated from network-enabled domestic devices is customized by users according to their own lifestyle, including shopping, childcare, nursing, and working environment.

Jasmy IoT Platform x The Reward System

Just as personal data has been concentrated within centralized companies, and these companies that use it are more and more dominating the world, we are now aware that personal data turns out to be the "new oil" of the digital age.

Payment Services

Our President Sato believed a user's personal data should have a wallet of its own, just like personal property. Imagine a 'Data Wallet' that allows users to safely store their own valuable data in the Personal Data Locker (PDL) and actively utilize the data.

JASMY COIN STAKING

O N B E P - 2 0 T O D A Y

BLOCKCHAIN	BEP20

TYPES OF REWARD

1

Referral Reward

2

Fast Track Reward

3

Level Reward

4

Stake Reward

INVESTMENT

\$100

Note : Firstly, we need to invest \$100 to activate, "jasmy to jasmy".

REFERRAL REWARD

**"Earn a \$5
Referral Reward
on All Activations"**

FAST TRACK REWARD

DIRECT	REWARD
10	\$120
+	
20	\$250
+	
30	\$360
+	
40	\$480
+	
50	\$600

To qualify for the \$120 reward, you must activate 10 direct referrals on the same day. There are a total of 5 rewards available, and they will be distributed based on the number of direct referrals completed on that day, as given in the table.

You will receive a referral bonus of \$5 for each direct referral from 10 up to 150. After reaching 150 direct referrals, the referral bonus will increase \$20 per referral.

The earning limit is 10 times. After 10 times the re-deposit amount will be only \$100. Re-deposit will be done only after the earning limit is reached.

LEVEL REWARD

LEVEL	REQUIRED DERECT
L1 - L10	1
L11 - L20	+2
L21 - L30	+3
L31 - L40	+4
L41 - L50	+5

LEVEL	INCOME
L1	\$9
L2	\$8
L3	\$7
L4	\$6
L5	\$5
L6	\$4
L7	\$3
L8	\$2
L9-L20	\$1
L21-L30	\$.5
L31-L40	\$.25
L41-L50	\$.15

Level reward is also available on deposit and re-deposit. There are 50 levels, and a total of \$64 will be distributed across these levels.

STAKE REWARD

- ❑ The income will be staked for reward or withdrawn as per the choice.
- ❑ Minimum Stake: \$10, Multiple: \$10, Maximum: No limit.
- ❑ Stake earns 1% daily and will be available for 22 days.
- ❑ Multiple stakes are allowed.
- ❑ The principal will be released after 24 hours, and you will receive the stake reward minus the principal.
- ❑ A 10% fee will be deducted from the remaining principal before it is released.

WITHDRAWAL

- Deduction at every withdrawal - 10%
